**PROJECTS**      **Tablepedia: Automatic Table Reading for Experimental Evidence**  
*Supervised by Prof. Meng Jiang*      July 2018 - September 2019

- Proposed an experimental evidence extraction system to automate the integration of tables (in the paper PDFs) into a database of experimental results.
- Proposed hybrid features including structural and semantic table features as well as an ensemble learning approach for table unification.

**Identifying Referential Intention with Heterogeneous Contexts**  
*Supervised by Prof. Meng Jiang*      July 2019 - December 2019

- Proposed a novel scheme in detecting referential intention commonly in academia, news and social media based on a theory in behavioral and social sciences.
- Proposed a neural framework with Interactive Hierarchical Attention to identify intentions of referential behavior by aggregating heterogeneous contexts.

**Complex Question Answering Generation for Tech Support**  
*Supervised by Prof. Meng Jiang and Dr. Lingfei Wu*      July 2019 - Now

- Proposed to *cross* variational auto-encoders by generating questions with aligned answers and generating answers with aligned questions, which outperforms the state-of-the-art answer retrieval method on SQuAD.
